

RELAY (MY3N-AC)

Description:

Relay - An electrically controlled mechanical device that opens and closes electrical contacts when a voltage (or current) is applied to a coil. A relay provides isolation of control signals from switched signals. Electromechanical device that opens or closes contacts when a current is passed through a coil. An electromechanical switch that uses a small amount of incoming electricity to charge an electromagnet, which physically pulls down a connecting switch to complete a circuit. This allows a low-power circuit to divert the electricity in a high-power circuit.

Feature:

- ✚ Coil voltages are AC and DC
- ✚ LED light for optional
- ✚ Coil has low power consumption and fast response
- ✚ CC, CCC safety certification
