

Connection Terminal, Code : CBC-20

A terminal block is a screw-type electrical connector where the wires are clamped down to the metal part by a screw. It is a connector which allows more than one circuit to connect to another circuit. It often contains two long aluminum or copper strips that are designed to connect different components.

General Attributes

- Under 10P from concatenated guide rail, can be mutual pressure directly 2P, installation convenient fast;
- More than 10P length, additional guide, more than 20P can be divided into two or three fixed first paragraph, is not restricted by the length of the longer, and very strong.
- PC material, high temperature resistance, strong toughness is not broken

Application Notes

In building wiring for the distribution of electricity
Connecting electrical outlets, luminaires and switches to the mains
Connecting major appliances such as clothes dryers and ovens drawing
Secure Remote Monitoring and Maintenance
